

ServiceNow AI. Accelerate Bootcamp

It all started in sunny San Diego, California in 2004 when a visionary engineer, Fred Luddy, saw the potential to transform how we work. Fast forward to today — ServiceNow stands as a global market leader, bringing innovative AI-enhanced technology to over 8,100 customers, including 85% of the Fortune 500®. Our intelligent cloud-based platform seamlessly connects people, systems, and processes to empower organizations to find smarter, faster, and better ways to work. But this is just the beginning of our journey. Join us as we pursue our purpose to make the world work better for everyone.

If you want to make work, work better, we want you. To learn more, check out our [Early Career Page!](#)

At ServiceNow, we are dedicated to fostering the next generation of AI innovators. We provide cutting-edge educational programs designed to equip students with the skills and knowledge to excel in the rapidly evolving field of artificial intelligence.

AI. Accelerate Overview:

Are you a technically curious and ambitious undergraduate student with a passion for Artificial Intelligence? ServiceNow invites you to explore our AI. Accelerate programs where you can develop practical AI skills and gain hands-on experience in a dynamic, fast-paced, and immersive environment.

This **eight-week bootcamp** is designed to provide a comprehensive introduction to the core concepts and techniques of AI, with a focus on practical application and real-world problem-solving. You'll learn from experienced instructors, work on challenging projects, and collaborate with a cohort of talented peers.

- **Dates:** June 15 – July 31, 2026 (Virtual)
- **Location:** Virtually via Zoom.
- **Duration:** 4 hours a week (plus homework)

What You'll Learn:

- **Agentic AI Foundations:** Understand what makes an AI system "agentic" — including autonomy, reasoning, and action-taking — and how LLMs are evolving from chat tools into decision-making agents.
- **Agentic Design Patterns:** Explore key architectural patterns including ReAct, chain-of-thought, tool use, and memory, and understand the difference between single-agent and multi-agent systems and when to use each.
- **Prompt Engineering:** Learn techniques for writing reliable, production-grade prompts that drive consistent and predictable agent behavior at scale.
- **Building Agents:** Design agents that use tools, APIs, and external data sources, and learn how to structure agent memory — both short-term and long-term — for complex, multi-step tasks.
- **Multi-Agent Orchestration:** Build and manage multi-agent workflows where agents collaborate, delegate, and hand off tasks to accomplish goals that no single agent could complete alone.
- **Evaluation Frameworks:** Learn why evaluations are the most critical part of building AI systems and how to design frameworks that define what to measure and how to measure it effectively.

- **LLM-as-Judge:** Use AI models to evaluate AI outputs at scale and build rubrics that distinguish between quantitative and qualitative evals in a production environment.
- **Red-Teaming & Adversarial Testing:** Identify failure modes before they reach production by stress-testing agents through red-teaming, adversarial prompts, and edge case analysis.
- **AI Safety & Responsible Use:** Understand real-world failure modes including hallucination, prompt injection, and behavioral drift, and learn how to build guardrails and safety checks into agentic pipelines.
- **ServiceNow AI in Practice:** Apply agentic AI concepts directly to ServiceNow's platform and enterprise use cases, with insights from ServiceNow engineers on how these challenges are solved in the real world.
- **Capstone Project:** Design, build, evaluate, and defend an AI agent from scratch — putting every concept from the program into practice and presenting your work to a panel of ServiceNow engineers and leaders.

Innovative Learning Structure:

- A blend of lectures, hands-on laboratories, and collaborative projects fostering a cohort-based, hands-on learning experience.
- The program concludes with a capstone project where participants showcase their work and apply their learning.

Prerequisites:

- Undergraduate student majoring or minoring in Computer Science (CS), Computer Engineering (CE), or AI/ML with a graduation **year 2028**
- Experience in Python programming.
- Experience with and/or knowledge of fundamental AI concepts, is a plus
- Availability to attend the full duration of the boot camp from June 15, 2026, to July 31, 2026.

Application Process:

- Interested candidates should **apply by April 13, 2026**, to be considered. Please submit a resume, a cover letter, and any related project work or AI experience. In your cover letter please share:
 - Why do you want to participate in this AI bootcamp?
 - Where do you see AI helping you in the future?
- Applications are evaluated continuously; therefore, early submission is recommended as spots are limited!
